1 Competitive programming template

```

1 //
2 #include <bits/stdc++.h>
3 using namespace std;
4
5 #ifndef SAWALHY
6 #include "debug.hpp"
7 #else
8 #define debug(...) 0
9 #define debug_itr(...) 0
10 #define debug_bits(...) 0
11 #endif
12
13 #define ll long long
14 #define int long long
15 #define all(v) v.begin(), v.end()
16 #define rall(v) v.rbegin(), v.rend()
17 #define minit(v, x) v = min(v, x)
18 #define maxit(v, x) v = max(v, x)
19
20 int32_t main() {
21     ios_base::sync_with_stdio(false);
22     cin.tie(NULL), cout.tie(NULL);
23
24     ${0}
25
26     return 0;
27 }

```

2 Competitive programming template with multi-tests

```

1 //
2 #include <bits/stdc++.h>
3 using namespace std;
4
5 #ifndef SAWALHY
6 #include "debug.hpp"
7 #else
8 #define debug(...) 0
9 #define debug_itr(...) 0
10 #define debug_bits(...) 0
11 #endif
12
13 #define ll long long
14 #define int long long
15 #define all(v) v.begin(), v.end()
16 #define rall(v) v.rbegin(), v.rend()
17 #define minit(v, x) v = min(v, x)
18 #define maxit(v, x) v = max(v, x)
19
20 void solve() {
21     ${0}
22 }
23
24 int32_t main() {
25     ios_base::sync_with_stdio(false);
26     cin.tie(NULL), cout.tie(NULL);
27
28     int t;
29     cin >> t;
30     while (t--)
31         solve();
32
33     return 0;
34 }

```

3 Increase the stack memory limit

```

1 static void run_with_stack_size(void (*func)(void), size_t stsize) {
2     char *stack, *send;
3     stack = (char *)malloc(stsize);
4     send = stack + stsize - 16;
5     send = (char *)((uintptr_t)send / 16 * 16);
6     asm volatile(
7         "mov %%rsp, (%0)\n"
8         "mov %0, %%rsp\n"
9         :
10        : "r"(send));
11    func();
12    asm volatile("mov (%0), %%rsp\n" : : "r"(send));
13    free(stack);
14 }
15
16 int32_t main() {
17     run_with_stack_size(main_, 1024 * 1024 * 1024 / 2); // run with a 512 MB stack
18     return 0;
19 }

```

4 Read an array of length n from the stdin

```

1 int n;
2 cin >> n;
3 vector<int> a(n);
4 for (int i = 0; i < n; i++) {
5     cin >> a[i];
6 }

```

5 Brute force primality test

```

1 bool is_prime(ll n) {
2     if (n < 2) return false;
3     if (n == 2) return true;
4     if (n % 2 == 0) return false;
5     for (ll i = 3; i * i <= n; i += 2)
6         if (n % i == 0) return false;
7     return true;
8 }

```

6 Miller & rabin probabilistic primality test

```

1 bool miller_rabin_ptest(unsigned ll n, int k = 3) {
2     if (n < 2) return false;
3     if (n == 2) return true;
4
5     while (k--) {
6         unsigned ll a = 1LL * rand() * rand() % (n - 2) + 2; // [2 ... n-1]
7         unsigned ll r = 1;
8         for (unsigned ll p = n - 1; p; p >>= 1) {
9             if (p & 1) r = r * a % n;
10            a = a * a % n;
11        }
12        if (r != 1) return false;
13    }
14
15    return true; // probably
16 }

```

7 Prime factorization in $O(\sqrt{n})$

```

1 map<ll, ll> primefacts(ll n) {
2     map<ll, ll> result;
3     int r = 0;
4
5     while (n % 2 == 0) {
6         r++;
7         n = n / 2;
8     }
9

```

```

10  if (r > 0)
11      result[2] = r;
12
13  int sqn = sqrt(n);
14  for (int i = 3; i <= sqn; i += 2) {
15      r = 0;
16      while (n % i == 0) {
17          r++;
18          n = n / i;
19      }
20      if (r > 0)
21          result[i] = r;
22  }
23
24  if (n > 2)
25      result[n] = 1;
26
27  return result;
28 }

```

8 Euler's totient theorm

```

1  std::vector<int> phi({1:n} + 1);
2  std::iota(phi.begin(), phi.end(), 0);
3
4  for (int i = 1; i <= {2:$1}; i++) {
5      for (int j = i < 1; j <= {2:$1}; j += i)
6          phi[j] -= phi[i];
7  }

```

9 Sieve's algorithm to mark numbers as primes and composites

```

1  void sieve(vector<bool> &is_prime) {
2      is_prime[1] = false;
3      is_prime[0] = false;
4      int s = is_prime.size();
5      for (int i = 4; i < s; i += 2)
6          is_prime[i] = false;
7      for (int i = 3; i * i < s; i += 2) {
8          if (is_prime[i]) {
9              for (int j = i * i; j < s; j += i + i)
10                 is_prime[j] = false;
11          }
12      }
13  }

```

10 Fast sieve's algorithm to calc minimum prime

```

1  std::vector<int> minp, primes;
2  void sieve(int n) {
3      minp.assign(n + 1, 0);
4      primes.clear();
5
6      for (int i = 2; i <= n; i++) {
7          if (minp[i] == 0) {
8              minp[i] = i;
9              primes.push_back(i);
10          }
11
12          for (auto p : primes) {
13              if (i * p > n) {
14                  break;
15              }
16              minp[i * p] = p;
17              if (p == minp[i]) {
18                  break;
19              }
20          }
21      }
22  }

```

11 Dijkstra's tsp algorithm

```

1  long long dijkstra(int s, int e, vector<vector<pair<int, int>>> &adj) {
2      int n = adj.size();
3      vector<int> prev(n + 1);
4      vector<ll> dist(n + 1, 1e18);
5
6      typedef pair<ll, int> item;
7      priority_queue<item, deque<item>, greater<item>> qu;
8      qu.push({0, s});
9      dist[s] = 0;
10
11      while (!qu.empty()) {
12          auto [d, i] = qu.top();
13          qu.pop();
14
15          if (dist[i] < d) continue;
16          for (auto [j, D]: adj[i]) {
17              if (dist[j] > D + d) {
18                  prev[j] = i;
19                  dist[j] = D + d;
20                  qu.push({dist[j], j});
21              }
22          }
23      }
24
25      // for (int i = e; i != s; i = prev[i]);
26      return dist[e];
27  }

```

12 Mst (minimum spanning tree), kruskal's algorithm

```

1  struct Edge {
2      int from, to;
3      long long weight;
4      Edge(int from, int to, long long weight) : from(from), to(to), weight(weight) {}
5      bool operator<(Edge &e) { return weight < e.weight; }
6  };
7
